

A NEW DAHLIA FOR PLANT BREEDERS.

(*Dahlia maxonii* Safford, S. P. I. No. 49328.)

The three flowers here shown are from a single plant of a lilac-pink form of *Dahlia maxonii* that Mr. Wilson Popenoe found near Coban in the Alta Vera Paz, Guatemala. The double flower on the right and the semidouble one in the center of the picture arose as bud sports from the typical single-flowered plant. (Photographed by Mr. Popenoe, Tactic, Guatemala, January 9, 1920; P17707FS.)
